

NARROW COMPLEX, IRREGULAR TACHYCARDIA – ADULT/ADOLESCENT

ALS STANDING ORDERS:

1. Monitor and document cardiac rhythm with rhythm strip.
2. Pulse oximetry; if room air oxygen saturation less than 95%:
 - ▶ *High-flow oxygen by mask or nasal cannula at 6 l/min flow as tolerated.*
3. If chest discomfort or acute shortness of breath reported, consider 12-lead to evaluate for acute MI.
4. Assess for signs of hypovolemia; if hypovolemia suspected and lungs clear on auscultation and no signs of CHF:
 - ▶ *Normal Saline, infuse 250 mL; because of high risk for developing CHF, give only one 250 mL bolus in the field and during infusion, reassess for evidence of developing rales or worsened shortness of breath.*
5. ALS escort to nearest available ERC.

Approved:

A handwritten signature in blue ink, appearing to read "J. Phattonis".
